

AlphaEAN Demo

Quick Start and Full Version

1. FOUR FONT HEIGHTS

This package contains the Low, Medium, Standard and High demo fonts. They support EAN-13 and EAN-8 in applications with compatible OpenType shaping.

2. INSTALL AND TRY

Extract the ZIP file, close applications that use the fonts, and install the four OTF files using your operating system's font installer. Reopen your application and select AlphaEAN-Low, AlphaEAN-Medium, AlphaEAN-Standard or AlphaEAN-High.

For EAN-13, type ***1234567890128***. For EAN-8, type **%12345670%**. Select the entire text, including the delimiters, and apply the font. Use a complete valid code including its check digit. Keep normal character spacing and leave clear space around the barcode.

3. DEMO LIMITATIONS

The DEMO watermark appears on screen and in print and interrupts some bars. Use this demo to evaluate compatibility and layout. It does not represent the print quality or scanning reliability of the full version.

4. GET THE FULL VERSION

Visit the AlphaEAN product page for the full version, downloads and licensing:
<https://alphaencode.com/en/alphaean/>

Installing the full version replaces the matching demo fonts because they use the same internal font names. Close applications before installing and accept the replacement if your operating system asks. Reopen the applications afterwards. If an application still displays the demo, restart it or restart your computer.
